Abstract The authors examined the effects of a 10-week, 12-session, 120-min program on the self-esteem of 100 adolescents with low self-esteem. The program was designed to increase self-esteem by teaching self-esteem concepts, self-esteem skills, and self-esteem strategies. The program was evaluated using a pretest-posttest design. Results showed that the program had a significant positive effect on the self-esteem of the adolescents. The program was found to be effective in increasing self-esteem in adolescents with low self-esteem.
